Cloud Computing Big Data Analysis Assessment Tool-2

P. Prathip Raj
192521409

- ① Create a simple cloud software application for SIMATS hospital using any cloud service provider to demonstrate SaaS with fields

Aim:

To create a simple cloud based hospital information system using a cloud service provider and demonstrate the software as a service (SaaS) model

Software / requirements:

- * Cloud service provider
- * web browser
- * internet connection
- * HTML, CSS and JavaScript
- * cloud-based hosting platform

Fields used:

The hospital application contains the following fields

Field

Example

Patient name

Prathip Raj

Age

20

Address

Chennai

Phone

987651104

Email

Patient@gmail.com

Doctor name

Dr. Kumar

Disease

Fever

Procedure :

Step 1: open the selected Cloud Service Provider
Create / sign in to your account

Step 2: Create a new web application / Project
named hospital information System

Step 3: design a simple hospital registration Form

Step 4: Add the required input Field;

Patient name, age, address, phone, email, attender name
Doctor name, disease

Step 5: add a Submit / Register button to the form

Step 6: Connect the application to cloud storage / database
if provided by the selected cloud platform

Step 7: Deploy / host the application on the cloud

Step 8: Submit the details and verify that the
information is stored / displayed correctly

Sample output:

SIMATS Hospital Information System

Patient name : Prastip
age : 20
address : Chennai
Phone : 9876543210
email : Prastip@gmail.com
Attender name : Raj kumar
Doctor name : Dr. kumar
Disease : Fever

[Submit]

and
Result:

The cloud based hospital information system was successful created and deployed.

② Create a simple cloud software application for an online supermarket using any application for an online supermarket using any cloud service provider to demonstrate SaaS.

Aim:

To create a simple cloud-based online supermarket application using a cloud service provider and demonstrate the software as a service.

Software requirements:

Cloud service provider, web browser, internet connection, internet connection, HTML, CSS and JavaScript, Cloud-based hosting/database

Field used:

- * Customer name - royal.lkh
- * Address - Chennai
- * Phone - 9876543210
- * Email - Customer@gmail.com
- * item name - rice
- * item classification - Grocery
- * Quantity - 2

- Procedure:
- * open the selected cloud service provider and Sign
 - * Create a new project named online Supermarket
 - * Design a Customer and Shopping Form
 - * add fields for Customer name, address, Phone and email
 - * add a Submit/Order button
 - * Connect the application to cloud storage / database if available
 - * open the application using a web browser
 - * enter Customer and item details and Submit the Form

Sample output:

ONLINE SUPERMARKET
Customer order Form

Customer Name	: Ragul. bk
address	: Chennai
Phone	: 9876543210
email	: Customer@gmail.com
item name	: Rice
item Classification	: Grocery
Quantity	: 2

[Place order]

Result:

The Cloud based online Supermarket application was successfully created and deployed. It allows customers to enter their details, select items.

by ke/ 1) Demonstrate virtualization by installing a Type-2 hypervisor, creating and configuring a vm image with windows/Linux as the host os and create a virtual machine with 3 CPU, 10 GB RAM

Aim:

To demonstrate virtualization by installing a Type 2 hypervisor and creating a virtual machine with the required CPU, RAM and storage configuration

Software requirements:

host operating system windows / Linux, Type 2 hypervisor, virtual machine ISO Image, Computer / Laptop

VM Configuration:

Resource

Configuration

CPU

-

3 CPU

RAM

-

10 GB

Storage

10 GB

Host OS

-

windows / Linux

virtualization

-

Type-2

Procedure.

* start the computer with windows / Linux as the host os

* install a Type-2 hypervisor

- * open the hypervisor
- * select the Create / new virtual machine
- * enter the VM name
- * Configure the processor to 3 CPU
- * Allocate 10 GB RAM
- * Create a virtual hard disk with 10 GB Storage
- * Complete the VM Creation
- * Verify the CPU, RAM and Storage Configuration

Sample output:

Virtual machine

VM Name : Test Vm
 Host OS : windows / Linux
 CPU : 3 CPU
 RAM : 10 GB
 Storage : 10 GB
 Status : Running

Concept:

A Type 2 hypervisor runs on top of an existing host operating system. It allows multiple virtual machines to be created and managed on the same physical computer.

Result:

The virtual machine was successfully created using a Type-2 hypervisor with 3 CPU, 10 GB RAM and 10 GB Storage.

Demonstrate virtualization by installing a Type-2 hypervisor. Creating and Configuring a VM image
Creating a Snapshot of VM and testing it by loading the Previous Version / Cloned VM

Aim:

To demonstrate the Snapshot Feature of virtualization^{ion} by creating a Snapshot of a Virtual machine and restoring / testing the previous version

Software requirements:

Windows / Linux host OS, Type 2 hypervisor, Virtual machine, guest operating system, Sufficient Storage

Procedure:

- * start the Computer with windows / Linux as the host OS
- * open the installed Type-2 hypervisor
- * Create or open a virtual machine
- * install and configure the guest operating system
- * open the Snapshot option in the hypervisor

- * Create a new Snapshot
- * Give the Snapshot a Suitable name, Such as before Changes
- * make Some Changes to the virtual machine
- * Shut down or pause the VM
- * Select the previously Created Snapshot
- * restore/load the Snapshot
- * Start the VM and verify that the previous VM state has been restored

Sample output:

VM Snapshot

VM Name : Test VM

Snapshot Name : before changes

initial State : working

Change made : Yes

Snapshot Created : Yes

Restore Snapshot : successful

Previous version : loaded

Status : Tested Successfully

20 A VM Snapshot Saves the state of a virtual machine at a particular point in time. it can be used to return the VM to that earlier state after changes have been made.
result:

The VM Snapshot was successfully created and tested. The previous version of the virtual machine was successfully loaded.
